

Dataset

1. Cybersecurity Threat Data

- **Phishing, Malware, and Ransomware Datasets** (e.g., Kaggle, VirusTotal).
- Useful for analyzing specific threats like phishing, malware behavior, or ransomware attacks.

2. Cybersecurity Incident Data

- **Data Breach Datasets** (e.g., Privacy Rights Clearinghouse, Have I Been Pwned).
- Useful for studying real-world breaches, attack types, and financial impacts.

3. Cybersecurity Best Practices Data

- **Antivirus Detection and Firewall Efficacy Datasets** (e.g., Kaggle).
- Analyzes effectiveness of cybersecurity defenses like antivirus software and firewalls.

4. Network Traffic and Intrusion Detection

- **IDS and Network Traffic Datasets** (e.g., Kaggle, NSL-KDD).
- Used for detecting network attacks or abnormal traffic patterns.
